

## **Technical Information**

### **Hardener L 5515**

#### **Hardener for solvent based flocking adhesives**

Hardener L 5515 is a hardener (curing agent) for a number of flocking adhesives based on solvents. As the curing-conditions and adding quantities vary, these data are to be taken from the resp. Technical Information Sheets of the adhesives used.

<b>Base</b>	Aromatic Poly-Isocyanate
<b>Color</b>	Colorless, translucent
<b>Solid contents</b>	67 % approx.
<b>Density</b>	1',15 g/cm³ approx.
<b>Flash Point</b>	+ 38° C approx.
<b>Safety tips/ Environmental protection</b>	Please check the resp. safety data sheet o those products used
<b>Storage</b>	12 months (at 20° to 25° C in the original packing)  Hardener L 5515 is sensitive to humidity and, therefore has to be stored in tightly closed original containers. Storing at higher temperatures leads to a rise in viscosity because of building up of polymers resulting in an efficiency decline.
